Project Reference

Waterproofing & Radon Protection

Donegal Garda Station

Description

SURFASOLOGY provided the Waterproofing and Radon protection for the below ground reinforced concrete of the new extension to Donegal Garda Station.

DualProof T Membrane was installed under the reinforced concrete slab, whilst DualProof S Membrane was installed as a post applied self-healing membrane on the reinforced concrete walls.

The construction joints in the concrete were detailed with CEMflex VB Plate Waterstop.

Maxseal Flex, a flexible waterproof coating, was used to provide continuity between the below-ground waterproofing and the Damp Proof Course.

CHH were the consulting engineers and Boyle Construction were the Main Contractors for this project.
