

YOU MIGHT JUST NEED A WATERPROOFING SPECIALIST

BS 8102:2009 Code of Practice
for protection of below ground structures against water from the ground

BS 8102:2009 gives recommendations and provides guidance on methods of dealing with and preventing the entry of water from surrounding ground into a structure below ground level.

BS 8102:2009 covers the use of:

- a) Waterproofing barrier materials applied to the structure
- b) Structurally integral watertight protection
- c) Drained cavity protection

BS 8102:2009 states that *“a waterproofing specialist should be included as part of the design team so that an integrated waterproofing solution is created”*. The principle objective of this recommendation is to ensure the design team are provided with information and guidance that will assist with and influence the design, installation and the future maintenance of the waterproofed structure.

“The waterproofing specialist could be the manufacturer or material supplier, provided that the manufacturer/supplier has the relevant expertise”.

Our Technical and Specification Manager, Michael McDonagh, is fully trained and certified by the manufacturers of our complete range of waterproofing products, in addition to being a Certificated Surveyor in Structural Waterproofing (CSSW) accredited by the Property Care Association (PCA).

At SURFASOLOGY™, it is our number one priority to ensure that we offer our clients the most suitable and reliable solutions that comply with BS standards, CE Marking and EN Standards, and other applicable design guides. We understand that standard details on product application and installation available from manufacturers are not absolute. For this reason, we tailor waterproofing designs and suitable product options to each individual project.

Should you need the assistance of a waterproofing specialist on your current or planned project, please do not hesitate to contact us:
